

In the Specification:

Please amend the specification at page 8, lines 26-31 as follows:

Furthermore, the sign strip 4 can be provided with more or fewer connecting means 9 (dovetails), in order to allow the electric signs L1, L2 to be directed in other directions than that shown in the Figures. It is also realised that a connecting means 9 having an outer circular shape, can enable infinitely variable positioning of the sign, by interaction with a groove 7 adapted therefore in the mounting arrangement 3, which groove will give a desired friction/clamp fit. Fig. 5c through 5e show a female element 30 and a male element 31.
